

01. Brainstorming and Ideation

Implement Client Script & UI Policy (Incident)

Project Title

- Implement Client Script & UI Policy – Incident

Problem Identification

- In ServiceNow, Incident forms contain several fields that may need to be controlled dynamically based on the values selected by the user. Manually enforcing these requirements can lead to incomplete or inconsistent incident records.

Proposed Idea

- The project uses Client Scripts and UI Policies to dynamically control the Incident form. The solution demonstrates field visibility, mandatory status, read-only status, automatic field value changes, and dynamic form behavior.

Main Idea

1. Configure the Incident form.
2. Create a Client Script.
3. Create UI Policies.
4. Configure UI Policy Actions.
5. Apply conditions based on Incident field values.
6. Test the form using different scenarios.

Expected Benefit

- The project improves the Incident form by making it more dynamic, user-friendly, and consistent.
