

02. Requirement Analysis

Implement Client Script & UI Policy (Incident)

Functional Requirements

- Use the ServiceNow Incident table.
- Create a Client Script for dynamic field behavior.
- Create UI Policies for controlling form fields.
- Make selected fields mandatory based on conditions.
- Make selected fields visible or hidden based on conditions.
- Make selected fields read-only when required.
- Automatically update field values when conditions are satisfied.
- Test all configured behaviors.

Example Requirement

- High priority incident → Make additional information mandatory.
- Specific category selected → Display relevant field.
- Incident state changed → Control field behavior.
- Certain condition satisfied → Make field read-only.
- Form loaded → Execute Client Script.

Incident Fields Used

- Number
- Caller
- Category
- Subcategory
- Impact
- Urgency
- Priority
