

05 - Project Development

Incident Table

- The project uses the default ServiceNow Incident table: incident.

Client Script Configuration

- Name: Incident Dynamic Field Control
- Table: Incident
- Type: onChange
- Field: Priority

Example Client Script

```
function onChange(control, oldValue, newValue, isLoading, isTemplate) {  
    if (isLoading || newValue == '') {  
        return;  
    }  
  
    if (newValue == '1') {  
        g_form.setMandatory('description', true);  
    } else {  
        g_form.setMandatory('description', false);  
    }  
}
```

Script Explanation

- When the Incident priority changes to Critical, the Description field becomes mandatory. For other priorities, the Description field is not mandatory.

UI Policy

- Name: Incident - High Priority Field Control
- Table: Incident
- Condition: Priority is 1 - Critical

UI Policy Actions

- Description: Mandatory = True, Visible = True, Read-only = False.
- Assignment Group: Mandatory = True, Visible = True, Read-only = False.

Additional UI Policy

- Example: Category is Software. A selected software-related field can be made visible or mandatory when this condition is satisfied.
